

integration testing
for **SAP**

For those people who depend on IT excellence, Siamease is a professional product to compliment your SAP system.

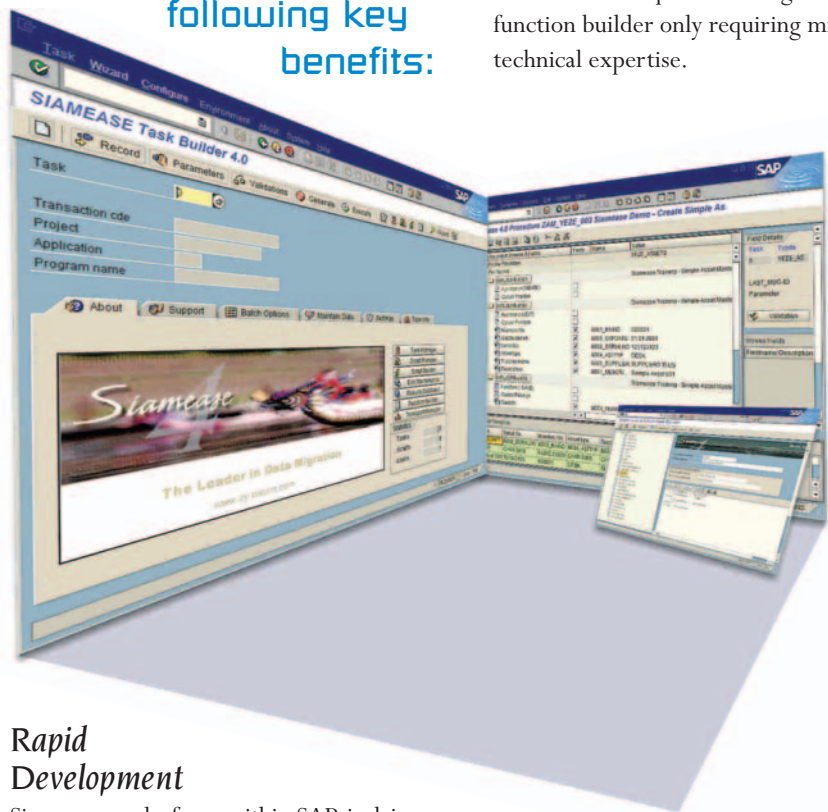

From Blueprint to Post Implementation, Siamease offers key benefits that address:

- ✓ Integration Testing complete business process automation
- ✓ Data Maintenance comprehensive and conditional
- ✓ Data Migration simple, complex and process oriented migration
- ✓ Interfacing business defined ongoing migration
- ✓ Stress Testing generating test data and replicating relevant business activities
- ✓ Training generating and capturing scenario data for training purposes

We take data seriously, but no more than your business processes feeding it. If you are serious about data quality and integration testing you need Siamease. If you believe that IT cannot deliver rapid solutions, then Siamease will redefine your perspective.

Siamease offers IT excellence through the following key benefits:

Rapid Development

Siamease works from within SAP, is driven by business analysts and operates on business processes without technical support. Delivering functionality that can be reused throughout other activities to help reduce transaction costs and improve your return on investment.

Non-Technical

Offering a functional view on something typically seen as technical. Siamease takes the technicality away, allowing focus on real business issues.

Versatile

From Data Maintenance to Interfacing, data migration to building training clients, simplifying SAP transactions to automating an entire integration test procedure. Most of our clients continue using Siamease long after it resolved their immediate needs.

Comprehensive

Siamease doesn't start the process to leave you in the lurch at the end. Its functionality covers simple transactions through to complex transactions. Integrating customer eccentric development through an internal function builder only requiring minimal technical expertise.

Business Process Oriented

Siamease manages business processes, including the automation of transactions, managing data for input and audit requirements, Project managing activities with status control and offering a role based tool that provides a different focus for different people involved in the process.

Siamease is a professional complement to your SAP system, but more importantly it is crucial for the success of your IT team going forward.

Our Blue Chip customers had the opportunity to buy any product for their system. They didn't buy any product they bought Siamease and still utilise Siamease within their SAP systems today. Siamease offers our customers, IT excellence, with business-oriented functionality, empowering IT support.

Components

Task Builder

Automation of a business transaction, both simple and complex header and detail transactions.

Task Manager

Management of tasks across Projects, Applications and systems.

Script Builder

Defining Business Process, project management and status control.

Script Manager

Management of business processes across applications and systems.

Function Builder

Integration of development into functional solutions without rewriting entire process.

Results Database

User Defined audit and data repository for process-oriented activities.

DXV

Central unstructured data warehouse housing reusable data for testing, training or migration.

Validation Layer

Advanced functionality to validate and auto-correct input data, ensuring that data is absolutely correct.

Mapping

Static and dynamic user defined mapping / conversion providing a conversion tool that thinks for itself and assists with data mapping from legacy to SAP codes.

Progress Monitor

Monitoring with load analyses, forecasting and comparison between processing between systems.

Technical specification

Usability

- Developed in ABAP and accessed from within SAP via transaction codes.
- Wizards and builders assist new users with advanced features.
- Users need only know how their SAP business transactions work.
- Function builder allows developers to integrate ABAP code into standard Siamease without knowing Siamease or having to recode any programs.
- Support and training material are available via the Internet integrated into Siamease.
- Trial period is available for evaluation.
- Installed via transport requests.

Technically advanced

- Generate comprehensive ABAP programs in customer name range.
- Can handle complex transactions that contain multiple line items and multiple screen sequences per item e.g. Bills of Materials, Stock take on, GL Take on, Sales orders
- Data can be loaded from several sources including bulk data from the windows clipboard.
- Data maintenance facilities within Siamease utilise data directly from SAP.
- Siamease automation programs can be embedded into user exits and other enhancements.
- All generated programs are fully documented and classified into projects and applications.
- Dynamic mapping and results managed data loads allow Siamease to refer to previous data loads as a source of data for new loads. E.g. Approving a deal just created in a prior step.

Rule Based

- Has validation layer that verifies, reports errors and can auto-correct obvious errors.
- Data Maintenance and Integration testing can be conditional
- User defined static mapping allows simple mapping tables to be built and assigned to tasks.
- Data management allows spreadsheets or sample data to be stored internally in SAP and reused for various activities.
- All activities are managed via Siamease managers and include transport management as well as project management.
- Progress Monitor updates static's for estimating Production data loads.
