

data integrity for **SAP**

Trust sees data the way we see the real world and delivers a unique analytical tool for data quality,

- ✓ For those people who depend on the quality of their data, Trust redefines belief. Delivering a unique analytical tool for data verification. Trust is uniquely developed to assist IT with Audit, Data verification before and after data migration, Data Compliance and Exception reporting.
- ✓ Trust is capable of building its own data model of your business and identifies anomalies therein. Through this model, Trust categorises your data into stable, diverse and conforming data categories.
- ✓ Trust delivers a hi-tech leading edge product that is designed for Business IT Support. Operating within SAP R/3, Trust has authorised access to database tables, data views and information sets.
- ✓ In addition to anomalies, Trust presents data corrections and sample data covering various scenarios that exist within the model. These scenarios can then be used for accurate integration and regression testing.
- ✓ Trust will ensure that your data conforms to your business norms, helping you to take steps towards complete data and process compliance.

Give us a call, we will arrange a trial for you.
